# Strategic Exit

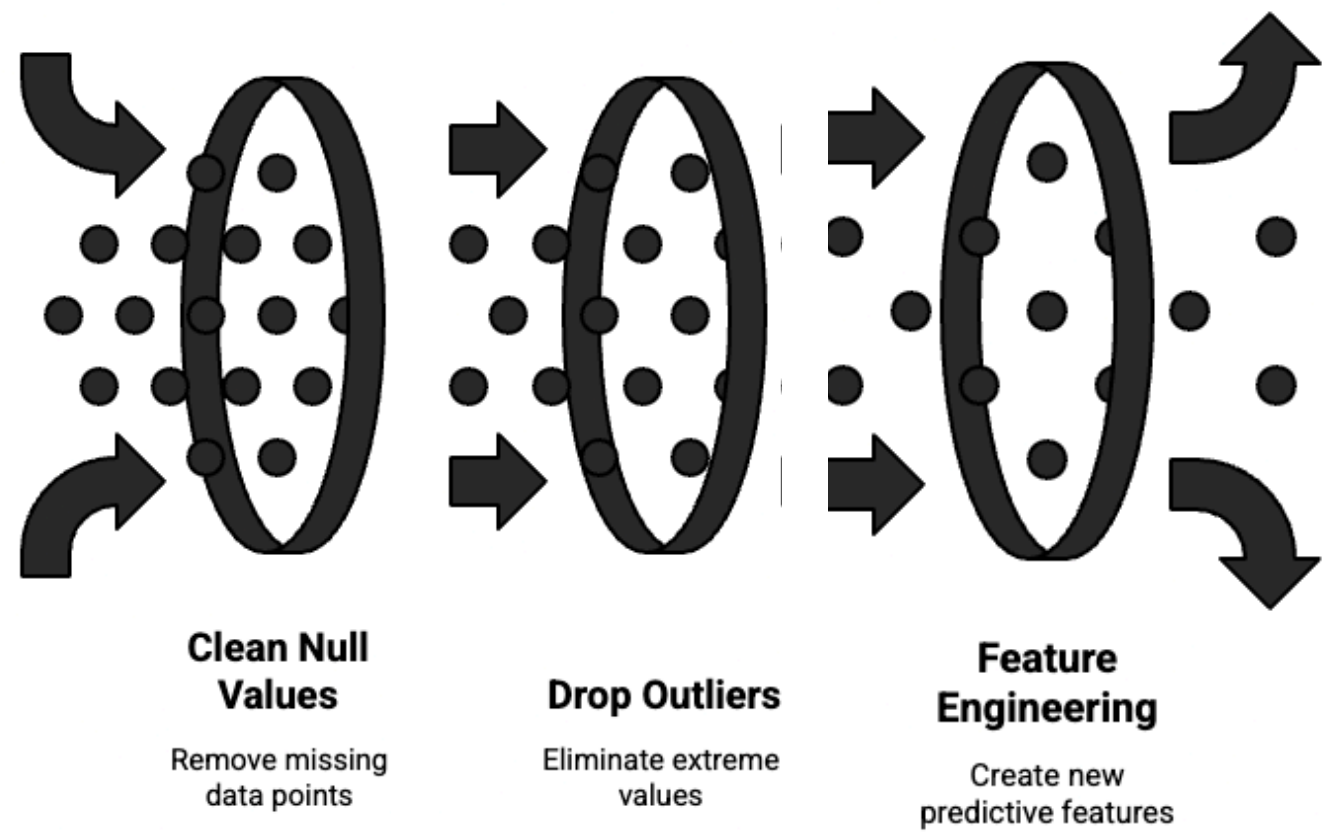

Presented by Swari Tamboli

# SEATTLE

# The Portfolio

## Data Preparation Process

# Hypotheses

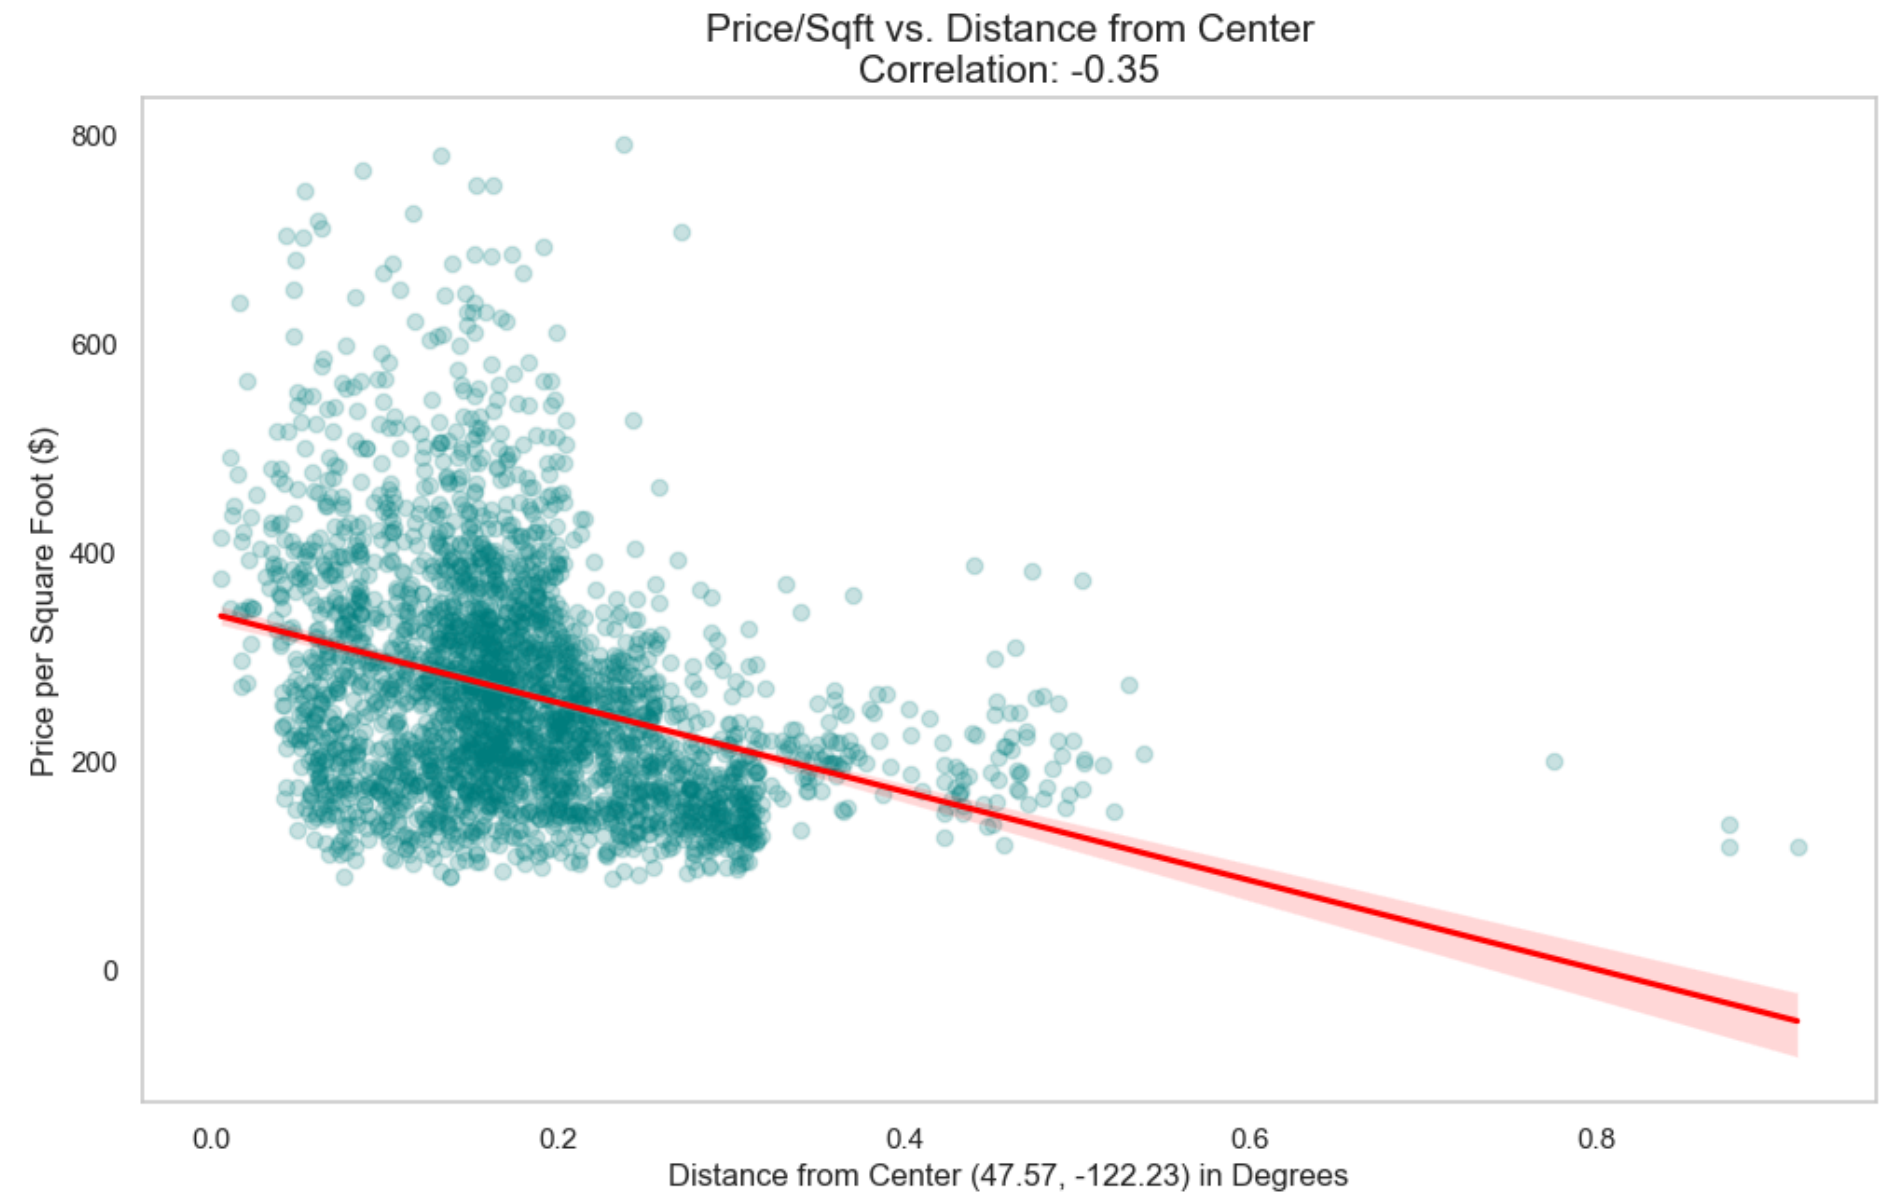

- **Location Hypothesis:** Proximity to the city center significantly increases price-per-square-foot.
- **Renovation Hypothesis:** High-grade homes (Grade  $\geq 9$ ) in center see a major price premium after renovation.
- **Timing Hypothesis:** Spring listings (March–May) yield higher average sale prices than winter months.

# Location Analysis

## Central Assets

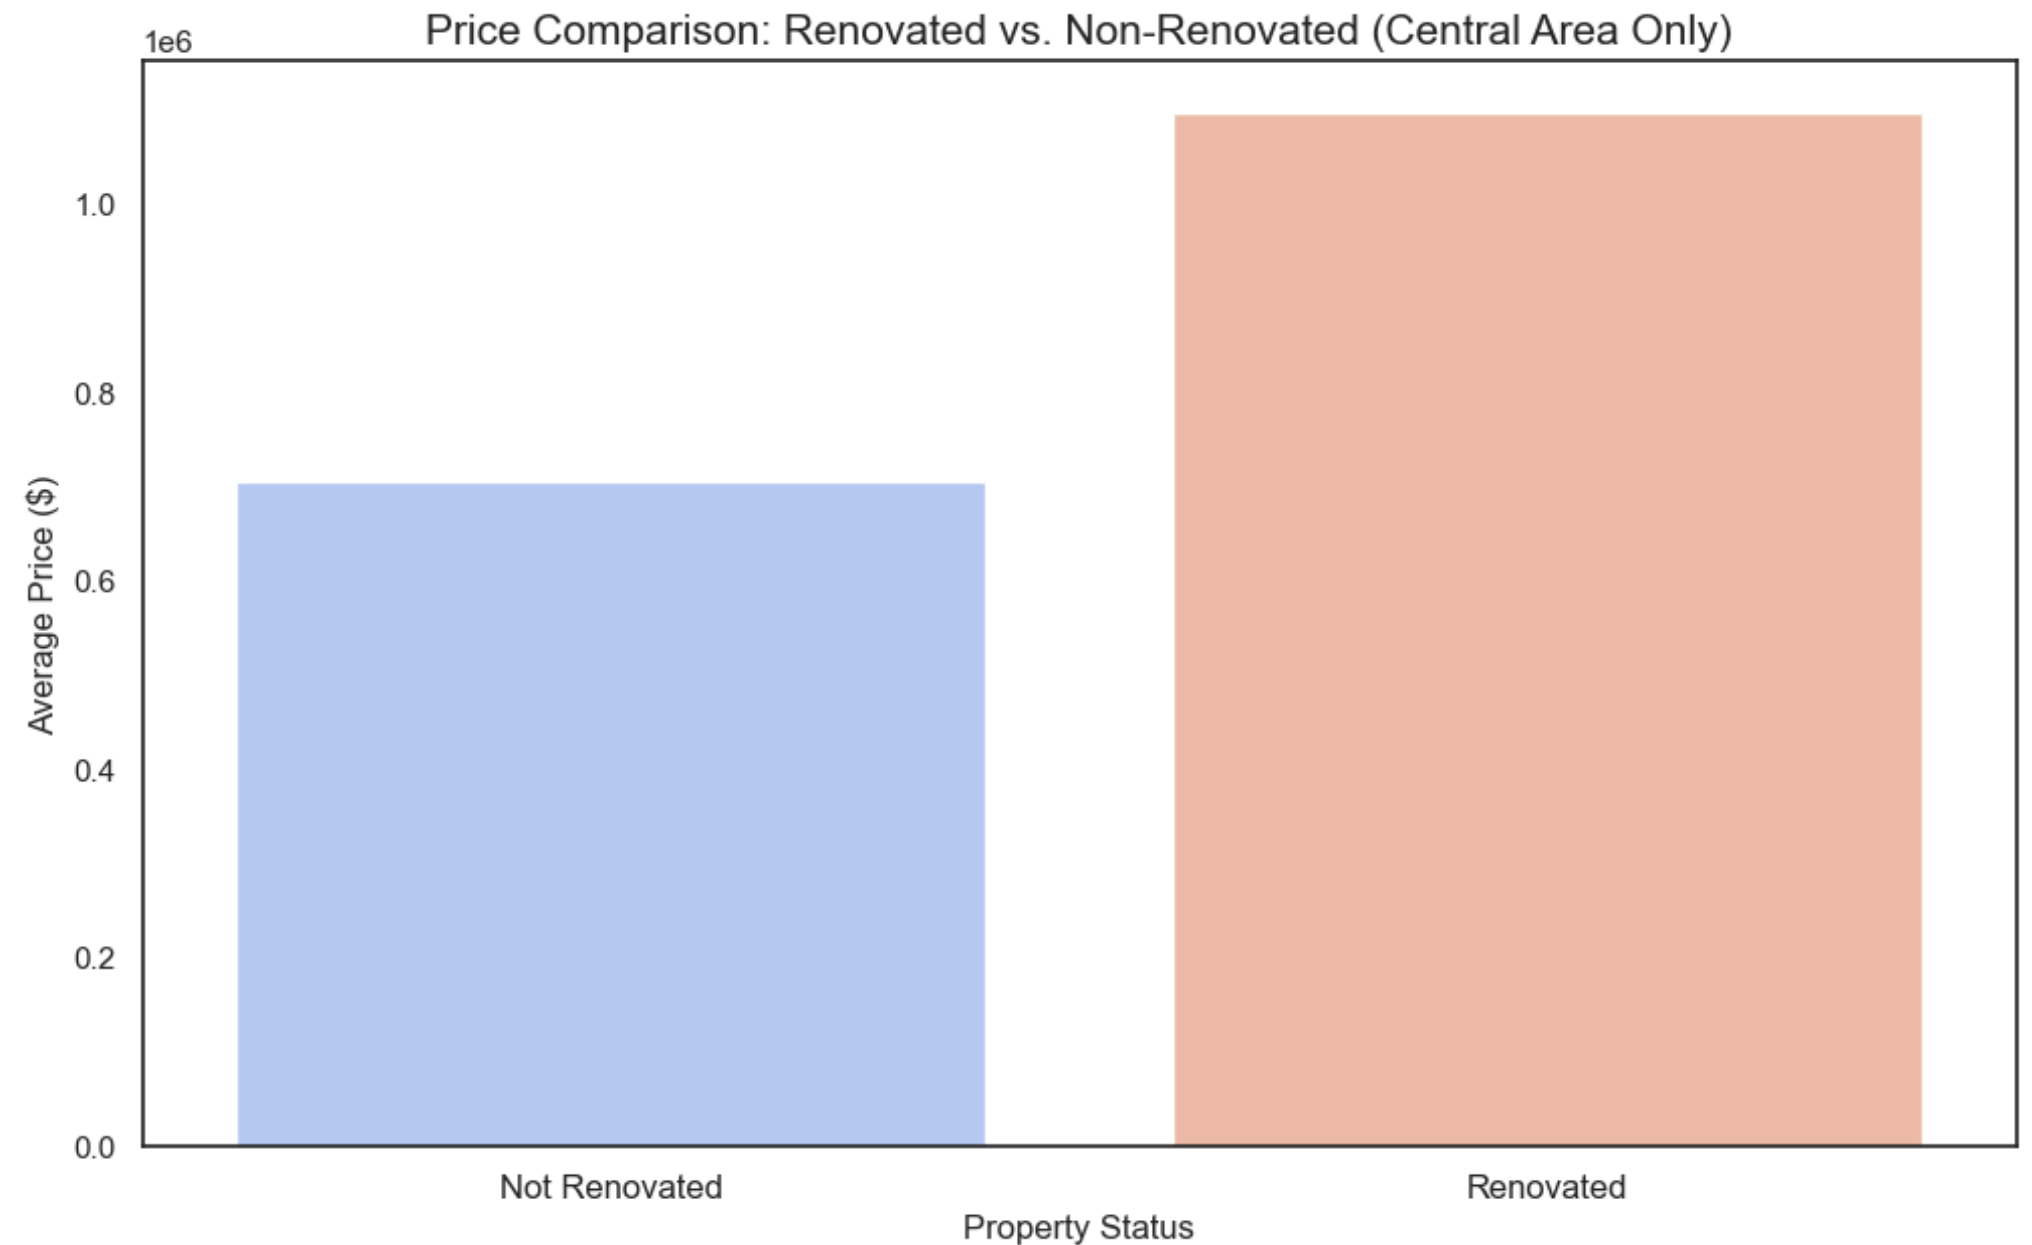

- Closer to Center = Higher Value
- Central positioning is crucial for maximizing asset value.

# Renovation Analysis

## Value Proposition

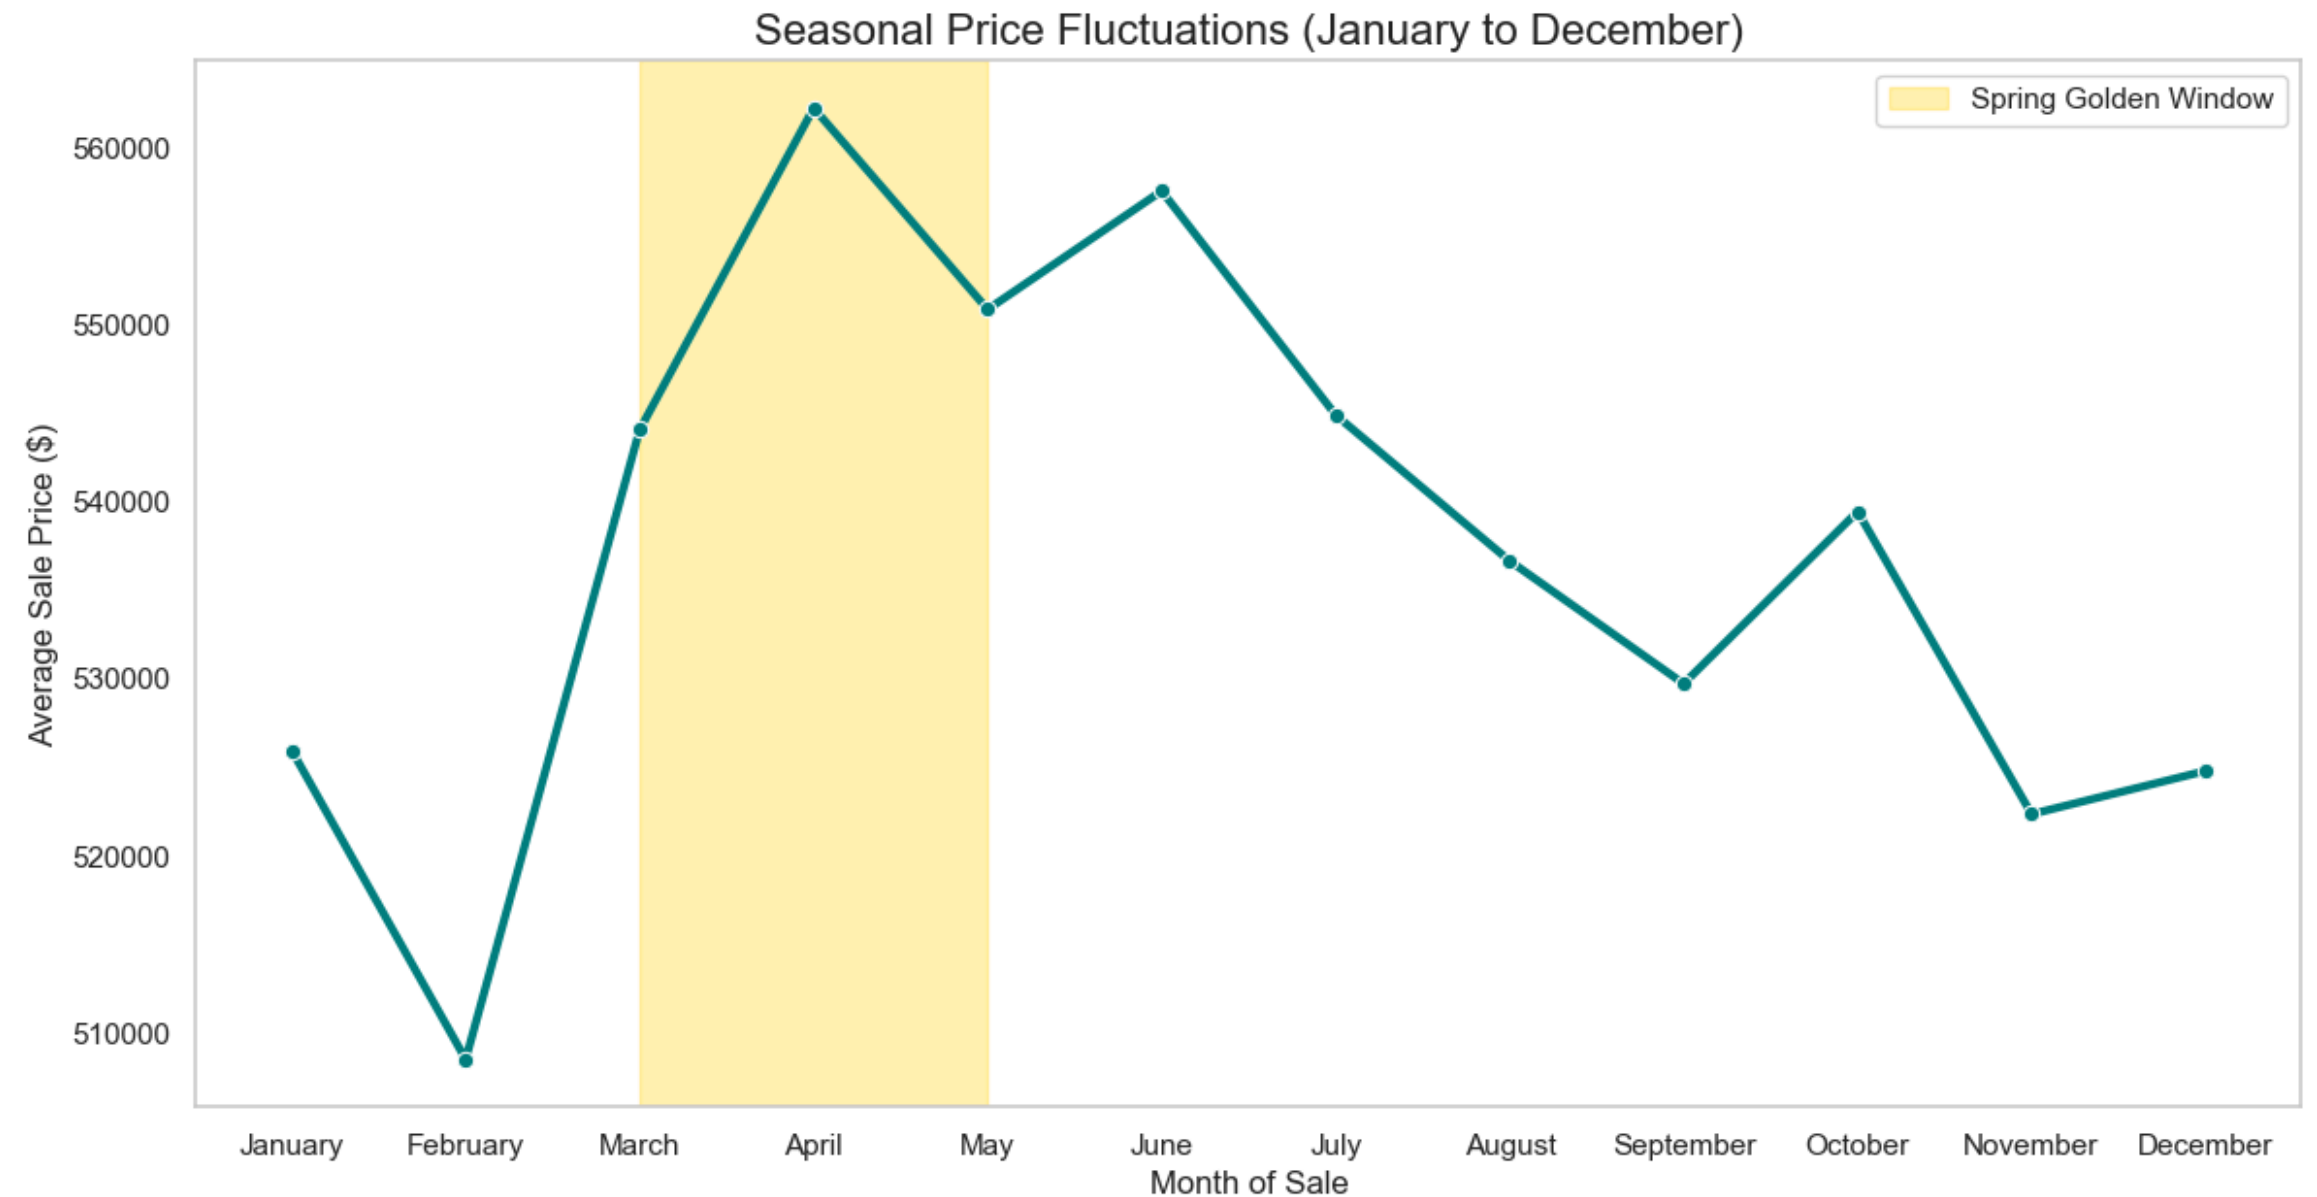

- Renovated high-grade homes command higher average price compared to non-renovated properties
- Modernised properties consistently outperform standard market listings

# The Golden Window

## Optimal Selling Time

- Selling in April captures the highest average sale price of the year
- Precise exit timing is essential for optimizing the value of urban assets

---

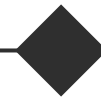

# Action Plan

## Renovations

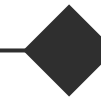

Execute high-impact renovations until January for maximum effect.

## Staging

In February, professional staging and photography will enhance property appeal.

## Listing

List properties in March/April to capitalize on the Spring price peak.
